

Watching videos with captions

Windows users

Students can use various software options to watch videos with captions. A widely used and reliable choice is the **VLC media player**, which is free and available for download [here](#).

Once you have installed the player, captions can be added in two ways:

1. **Automatic recognition (recommended)**
 - Make sure the video and caption file have the same name.
 - Example:
 - 0_1_installation_Windows.mp4
 - 0_1_installation_Windows.vtt
 - When you open the video in VLC, captions load automatically.
2. **Adding captions manually**
 - Open the video in VLC.
 - In the top menu, go to **Subtitle** → **Add Subtitle File**.
 - Select the provided caption file.
 - The captions will then appear in the video.

Tip: You can switch subtitles on/off or adjust settings via the **Subtitle** menu in VLC.

MacOS users

Students can use many software options to watch videos with captions. One recommended option is the **Elemdia video player**, which is free and available for download [here](#).

Once you have installed the player, you can add captions to your video in two different ways:

1. **Using the menu**
 - Open the video in Elemdia.
 - Right-click (or click the settings/menu button).
 - Select **Subtitles** → **Add Subtitle File**.
 - Choose the provided caption file (usually ending in **.vtt**).
 - The captions will then appear in the video.
2. **Dragging the file**
 - Open the video in Elemdia.
 - Drag the provided caption file (e.g. **.vtt**) into the player window.
 - The captions should appear automatically.

Tip: Once captions are added, you can turn them on or off via the subtitle menu in the player.

Disclaimer: The software mentioned above (Elemdia and VLC) is provided only as a recommendation for convenience. We are not affiliated with or compensated by these providers. Students are free to use any video player that supports external subtitle files. Please note that if you watch the videos directly in the browser, the captions will not be visible, since they are not embedded in the video.
